Fully Assembled  
All New Components

**Includes**

Boot Kit & Bumper  
Mount  
Hardware  
Bearings  
Bushings

At FCS Automotive, we take pride in providing customers with complete and reliable repairs. Our shock absorber assembly kits offer numerous benefits, just like our complete strut assemblies. By opting for our complete repair solution, which is sold in pairs, you can save both time and money. Rest assured that all our parts are brand new and manufactured to OE specifications to ensure the perfect form, fit, and function.

## Shock Absorber Assembly Kits

## Shock Absorber & Coil Spring Assemblies

- These shocks fit several popular rear applications equipped with attached OE specific mounts that can show wear and tear over time.

- Each of these units can be ordered as a matched pair with the mount and coil spring already attached at one combined price.

The key advantage of buying in pairs is that it eliminates the need for the tech to disassemble the original shock from the mount along with any other hardware and then reassemble all the components back on the replacement mount before reinstalling it on the vehicle. This ensures a fast and complete repair.

- Replacing both sides of the vehicle is always recommended as provides better overall performance compared to changing just one side. It also helps reduce any chance of a comeback due to noise from a worn mount or other related hardware.
